A small plan. A better kitchen.

START HERE / Instructions and a worked example

Choose one cabinet, drawer or pantry zone. Print at **100% / actual size** in the matching paper format. These worksheets record measurements; drawings are not to-scale templates. No account or email is needed.

1. Measure. Empty the space. Record the narrowest interior and clear opening. Mark hinges, pipes, shelf lips and the closed-door line. Choose centimetres or inches and write the unit beside every value.

2. Compare. Use one continuous clear box, never the sum of gaps around a pipe. Check assembled product dimensions, contents, insertion and movement. Follow the exact installation manual.

3. Try it. Make a paper footprint. Test the door and the daily task. Buy only the missing function, then review your layout after a week.

WORKED EXAMPLE (cm)
Interior: 60 W x 50 D x 65 H. Clear opening: 56 W x 60 H. No obstructions. Chosen allowance: 0.5 cm at each end of every axis.
Maximum comparison box: **55 W x 49 D x 59 H cm**.
Width = min(60, 56) - 1. Depth = 50 - 1. Height = min(65, 60) - 1.
A 56 cm-wide fixed organizer fails the opening check. An equal-to-limit product needs a manual recheck.

Limits: this is a planning aid, not a safety or installation certification. Keep valves accessible. Do not modify plumbing, wiring or structural parts to fit storage. A clear outer box does not verify rails, load rating, door swing or stored-item height.

Measure the space you have.

WORKSHEET 01 / Cabinet measurements

Zone / cabinet name: _____

Date and chosen unit (cm or in): _____

Smallest interior width: _____

Usable interior depth (to closed-door line): _____

Clear height (to lowest obstruction): _____

Clear opening width: _____

Clear opening height: _____

Clearance allowance per side: _____

Take width readings at the front, middle and back. Record the smallest. Include hinges and shelf supports. For a drawer, check the lowest closing path. Note any uncertainty below.

What could block insertion? _____

Stored item height / lifting space: _____

Measurements to recheck before buying: _____
